## Internet Connectivity For Mission Critical Applications

---

VitalConnectivity is a fully managed solution which enables businesses to quickly deploy highly reliable Internet connectivity anytime and anywhere it is needed. VitalConnectivity provides Internet connectivity to two different major 4G carriers (typically Verizon and AT&T) using a simple, easy-to-install hardware appliance.

VitalConnectivity comes fully configured, so all you do is plug it in, and you have highly reliable Internet connectivity with integrated monitoring and a dashboard which will show you all of your connections, and data usage across all of your locations. VitalConnectivity allows you to avoid the complexity of configuring SIM cards, dealing with multiple carriers, configuring automatic connection failover, dealing with monitoring, and multiple invoices to pay each month.

No matter if you have one location or 1,000, VitalConnectivity makes reliable connectivity simple with features and cost that make your life easier. Excellent pricing combined with data pooling, monitoring, automatic updates, preconfigured hardware, and a world-class dashboard make VitalConnectivity a logical choice for a variety of applications.

### Why use Dual-Carrier 4G?

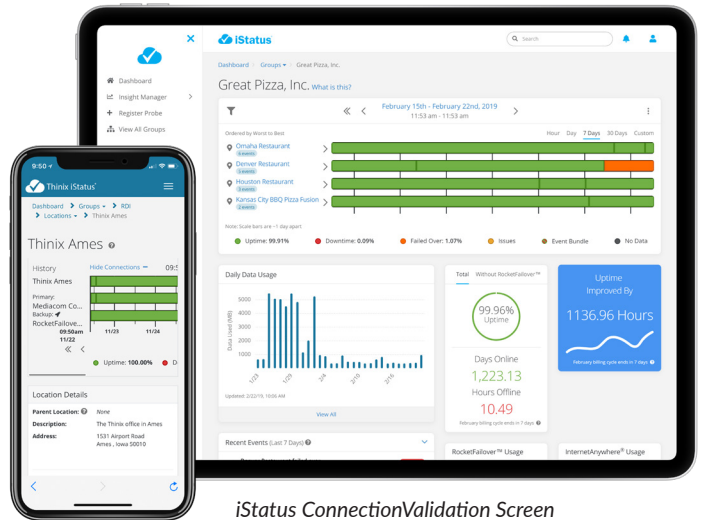

Before VitalConnectivity, when reliable Internet connectivity was needed, dual broadband connections (relying on copper or fiber) were implemented. However, many times the two broadband connections share a common 'last-mile' because cables may be in the same conduit or share the same physical path. This results in some failures occurring where both the primary and secondary connections are lost simultaneously.

For this reason, we designed VitalConnectivity to enable businesses to use dual-4G connections or a broadband connection with dual-4G connections as a backup.

VitalConnectivity solves these problems by utilizing dual (diverse) 4G connections to different carriers. This eliminates most 'last-mile' failures commonly associated with wired broadband connections and makes it simple for businesses to have two or more, independent Internet connections with automatic switching. So that whenever one connection fails, traffic moves to the other connection — keeping you online, so you continue to do business.

## iStatus® Monitoring

VitalConnectivity comes pre-bundled with iStatus, our distributed network monitoring platform. With iStatus, you gain visibility to all of your locations, all of your connections, and data usage. You get DataAlerts™ and IntelligentAlerts™ whenever problems occur. Our patented ConnectionValidation™ technology solves a critical problem of not knowing that failover connections are working and ensures that your businesses remain connected 24/7.

## Connectivity Just Got Easier

By combining blazing 4G LTE speeds and reliable hardware, into a single, convenient solution, we make it simple to deploy dual-carrier Internet connectivity. Obtaining reliable, lightning-fast coverage for multiple locations is now easier than ever; no more hassling with providers or lengthy required setup. Connect your phone, tablet, or wireless point-of-sale systems simply by plugging in VitalConnectivity.

Internet Connectivity for Mission Critical Applications

## Proudly Supporting Industry Leaders In:

- Multi-Location Retail
- Grocery & Convenience Stores
- Banking and ATM's
- Security and IoT applications
- Restaurants & Food Services
- Healthcare & Veterinary Facilities
- State, Local & Federal Government
- Military & National Guard

## Key Features:

Dual-Carrier 4G LTE connectivity

Live-In-Five™ gets you up & running quickly

Unified monthly billing for multi-locations

Eliminates "Last-Mile" Outages

Effective, low-cost solution with data pooling

iStatus monitoring with ConnectionValidation™
